

Choose for your health. Do the NierCheck!

1,7
MILJOEN

In the Netherlands, there are approximately 1.7 million people with chronic kidney disease

50%

Almost 50% of these men and women are not aware that they have chronic kidney disease

45+
JAAR

People aged 45 years and older have a higher risk to develop chronic kidney disease

People with chronic kidney disease have a higher risk of developing cardiovascular disease

Why do the NierCheck?

The NierCheck (kidney check) tests whether there is too much protein in your urine. This is a sign of (starting) kidney damage. Next to kidney damage, high blood pressure, high cholesterol, or high blood sugar might be present. By early detecting kidney damage, it can be treated earlier. This can prevent further damage to the kidneys, heart and blood vessels.

Participating in this research is free. It is carried out by:
